YOHPAL TEAM MORNING MEETING MINUTES
DATE: 13/10/2025

LOCATION: KAHAWA SUKARI
CHAIRPERSON: BERNARD KUNG'U

PREPARED BY: MADAM ELIZABETH

MEMBERS PRESENT

1. **Bernard**
2. **Ernest**
3. **Ian**
4. **Dennis**
5. **Kamau**
6. **Kingori**
7. **Elizabeth**

INTRODUCTION

The meeting focused on reviewing the ongoing progress in backend and frontend development for the Yohpal platform. Members provided updates on their current development tasks, including migration of functionalities, optimization of the video feed, and continued improvement of the admin panel and video features. The discussion also emphasized stability, interaction management, and preparation for the next build phase.

MEMBER UPDATES

1. **Bernard**

   Bernard is working on the Yohpal Admin system, focusing on setting up the creation of Holidays and Attendance Operations Modules. If time permits, he plans to proceed with the Leave Creation Operation Module. His main goal is to ensure that administrative operations are properly structured to support HRM integration within the platform.

2. **Ernest**

   Ernest has started moving client-side functionalities to the server side, with a key focus on the pagination functionality, shifting it from the client SDK to server-side management. He is also

structuring how video interactions and statistics will be handled for better performance and scalability.

3. **Dennis**
   Dennis is working on moving video interaction functionalities from client side to server side, to enhance performance and ensure consistency across all platforms. This improvement will support the integration of Redis for caching and efficient interaction tracking.

4. **Ian**
   Ian is restructuring the video upload flow by modularizing the upload features and decoupling the main file to achieve a more flexible system. He is also testing the integration of the newly created modules with the main codebase to ensure stability and maintainability of the upload process.

5. **Kingori**
   Kingori is focusing on optimizing the video feed to ensure that videos play instantly and that the comment section fetches accurate profile images for each user. He is improving the comment section UI, making it draggable to view all comments at once, and ensuring replies appear neatly minimized for a clean layout. Additionally, he is streamlining all interaction functionalities to correctly store and retrieve data from their respective fields, which will later be integrated into Redis for caching.

6. **Kamau**
   Kamau is working on merging Dennis' and Ian's branches and resolving merge conflicts to ensure smooth integration of recent changes. After resolving conflicts, he will proceed with video

editing improvements based on the modifications made last week. He will also be working on text editing

7. **Elizabeth**
   Elizabeth continues with her assigned tasks. She will also compile and circulate the meeting minutes.

CONCLUSION

The meeting demonstrated consistent technical progress across all development areas. Ernest and Dennis are transitioning key functionalities to server side for better performance, Ian is modularizing video upload features, and Kingori is refining the user interaction experience. Kamau is ensuring codebase synchronization, while Bernard advances administrative module development. The collective efforts reflect Yohpal's steady march toward improved system stability and a more seamless user experience.
